

Please amend the claims as follows:

1. (Currently amended) A method for delivering home repair information to a home owner over a global computer network, comprising the steps of:

(A) presenting the home owner with a first Internet web page that contains a first list of home repair topics;

(B) presenting the home owner, in response to selection by the home owner of a selected home repair topic from the first internet web page, with at least one second internet web page that contains a second list of home repair topics, wherein the second set of home repair topics ~~correspond~~ corresponds to specific home repair topics associated with the home repair topic selected from the first web page; and

(C) downloading a video segment to a computer associated with the home owner in response to selection by the home owner of a home repair topic from the second internet web page, wherein the video segment includes step-by-step instructions for completing a home repair project associated with the home repair topic selected from the second internet web page;

(D) presenting the home owner with a web page that contains a list of materials required to complete the home repair project;

(E) prompting the home owner to enter a zip code associated with a geographic location of the home owner;

(F) retrieving from a database, in response to the zip code and the home repair project, a list of suppliers in the geographic location of the home owner that can supply the home owner with each of the items on the list of materials required to complete the home repair project, and presenting the list of suppliers to the home owner; and

(G) retrieving from a database, in response to the zip code and the home repair project, a list of contractors in the geographic location of the home owner that can complete the home repair project, and presenting the list of contractors to the home owner, wherein the list of contractors is different from the list of suppliers.

2. (Original) The method of claim 1, wherein step (C) comprises the steps of:

(i) providing a preview video segment to a computer associated with the home owner in response to selection by the home owner of a home repair topic from the second internet web page; and

(ii) after the home owner views the preview video segment, downloading a full-length video segment to a computer associated with the home owner if the home owner approves of such downloading after viewing of the preview, wherein the full-length video segment corresponds to the home repair topic selected from the second internet web page.

3. (Cancelled)

4. (Currently amended) The method of claim 1 3, wherein the list of materials includes a quantity and a price associated with each item on the list of materials.

5-6. (Cancelled)

7. (Currently amended) A method for delivering auto repair information to a user over a global computer network, comprising the steps of:

(A) presenting the user with a first internet web page that contains a first list of auto repair topics;

(B) presenting the user, in response to selection by the user of a selected auto repair topic from the first internet web page, with at least one second internet web page that contains a second list of auto repair topics, wherein the second set of auto repair topics ~~correspond~~ corresponds to specific auto repair topics associated with the auto repair topic selected from the first web page; and

(C) downloading a video segment to a computer associated with the user in response to selection by the user of an auto repair topic from the second internet web page, wherein the video segment includes step-by-step instructions for completing an auto repair project associated with the auto repair topic selected from the second internet web page;

(D) presenting the user with a web page that contains a list of materials required to complete the auto repair project;

(E) prompting the user to enter a zip code associated with a geographic location of the user;

(F) retrieving from a database, in response to the zip code and the auto repair project, a list of suppliers in the geographic location of the user that can supply the user with each of the items on the list of materials required to complete the auto repair project, and presenting the list of suppliers to the user; and

(G) retrieving from a database, in response to the zip code and the auto repair project, a list of contractors in the geographic location of the user that can complete the auto repair project, and presenting the list of contractors to the user, wherein the list of contractors is different from the list of suppliers.

8. (Previously presented) The method of claim 7, wherein step (C) comprises the steps of:

- (i) providing a preview video segment to a computer associated with the user in response to selection by the user of an auto repair topic from the second internet web page; and
- (ii) after the user views the preview video segment, downloading a full-length video segment to a computer associated with the user if the user approves of such downloading after viewing of the preview, wherein the full-length video segment corresponds to the auto repair topic selected from the second internet web page.

9. (Cancelled)

10. (Currently amended) The method of claim 7 9, wherein the list of materials includes a quantity and a price associated with each item on the list of materials.

11-12. (Cancelled)

13. (Currently amended) A method for delivering cooking ~~repair~~ information to a user over a global computer network, comprising the steps of:

(A) presenting the user with a first internet web page that contains a first list of cooking topics;

(B) presenting the user, in response to selection by the user of a selected cooking topic from the first internet web page, with a second internet web page that contains a second list of cooking topics, wherein the second set of cooking topics ~~correspond~~ corresponds to specific cooking topics associated with the cooking topic selected from the first web page; and

(C) downloading a video segment to a computer associated with the user in response to selection by the user of a cooking topic from the second internet web page, wherein the video segment includes step-by-step instructions for completing a cooking project associated with the cooking topic selected from the second internet web page;

(D) presenting the user with a web page that contains a list of materials required to complete the cooking project;

(E) prompting the user to enter a zip code associated with a geographic location of the user;

(F) retrieving from a database, in response to the zip code and the cooking project, a list of suppliers in the geographic location of the user that can supply the user with each of the items on the list of materials required to complete the cooking project, and presenting the list of suppliers to the user; and

(G) retrieving from a database, in response to the zip code and the cooking project, a list of contractors in the geographic location of the user that can complete the cooking project, and presenting the list of contractors to the user, wherein the list of contractors is different from the list of suppliers.
